KeyMacro is a tool that allows you to store all the keyboard shortcuts you are most commonly using in your personal files. You can do this by creating macros and by using the application. There are quite a few advantages to using a tool like this: - Create any number of "key" shortcut macros that can easily be recalled. You can also create custom shortcuts, such as Ctrl+Shift+R or Ctrl+T. - Add custom parameters to the macros. You can for example set them to the clipboard or to the active document. - Add multiple shortcut keys to one macro. - Quickly recall or create all the shortcuts from a.cmd file or from a.reg file. - Easily display the macros. Installation: - Unzip the contents of the archive. - Run the program. Usage: - Start the program. - Enter the name you want to save the file under. - Press the "Create" button. - Enter a description. - Enter the shortcut you want to use. You can combine multiple keystrokes. - Save. - Now you can start the program again, and your new macro will be listed. You can select the shortcut, press ok to confirm, and then press the Ok button again to apply it. There are 2 different menus: 1. Macro Tools (Tools) 2. Macros (Macro) Use of this application requires no further configuration or registration. FFmpeg is a software suite to process audio and video, including DVDs, VCDs, and various streaming media formats. It is used by the majority of video editing software. Youtube-dl is a command line tool for downloading videos from video sharing websites such as YouTube.com. If you want to download many videos, you may find it more convenient to use a command line tool than to copy/paste URL after URL in your web browser. Videomass is an FFmpeg frontend and Youtube-dl GUI. It allows you to browse videos, copy or paste the URLs of the videos you want to convert, and then to start a FFmpeg command line or a Youtube-dl command line to convert the media. It also allows you to change the format of the output video, as well as to add post-processing filters such as resizing or the use of a stabilizer. Docker Docker Docker is a system for defining and running isolated virtual machines. It is popular with developers because it enables them to run the same software for many different purposes. Docker is a software that helps you to develop software applications in a fast and efficient way, which makes it very attractive for developers. This software helps you build applications quickly, using Docker. Docker brings in lightweight containers. A container has an isolated Linux environment and Docker simplifies the process of creation. Docker's development consists of building a new operating system in the form of containers that are actually software packages. Docker has a high level of abstraction, which makes it possible to support multiple platforms on the same physical server.
