A: It's the "you're not logged in properly" error I see most of the time. Your browser sends a header but the server has nothing for it (e.g. PHPSESSID is not set). So, it can't see what you're supposed to do and give you a page that tells you it can't understand you. Prevention of ventilator-induced lung injury in the injured adult pig. We developed a porcine model of ventilator-induced lung injury and investigated the effects of perfluorotributylamine (PFTBA), a protective surface coating, on reducing the degree of injury. After surgical preparation of 21 pigs and intubation with a tracheostomy tube, 21 pigs were ventilated with a low tidal volume, pressure-controlled mode for 18 h. Six pigs had a surface coating of PFTBA applied to the endotracheal tube; 6 untreated control pigs received no PFTBA, and 9 untreated control pigs received no PFTBA but had an endotracheal tube coated with polyvinyl chloride. After 18 h of ventilation, the animals were killed and their lungs were harvested for lung injury assessment. Our results demonstrate that ventilator-induced lung injury was present in 18 of 21 animals, but PFTBA-treated animals had lower lung injury scores than did control pigs. Herbicides may be used to kill or retard the growth of unwanted plants. The herbicides can be used to kill or retard the growth of weeds and other plant that are unwanted in areas where crops are grown. The term "herbicide" as used herein means a chemical compound that kills or retards growth of plants. Many herbicides are known and have been used to kill or retard growth of unwanted plants. Some herbicides such as oxadiazines, sulfonylureas, triazolopyrimidines, imidazolinones and sulfamates have been used for many years. It is well known in the agricultural art that certain herbicides are quickly degradable in the soil and may need to be reapplied at relatively short intervals. Since a large number of herbicides are known and used and because different soils have different degrees of decomposition, many herbicides need to be reapplied relatively often. In many cases the quantity of herbicide which needs to be applied may vary from time to time depending upon the weather, soil type, crop stage, growing conditions 4bc0debe42
