Before buying a copy of Photoshop, make sure you can afford it and your use of it is in line with your budget. Start Photoshop with a small, portable version. **Editing Versus Manipulating** Before you get into Photoshop, make sure you understand the differences between editing and manipulating. Editing is about removing unwanted parts of an image or replacing colors that are out of place. Manipulation is creating something new that wasn't there before. It's what you do when you take a picture of an inkjet-printed paper, say, and then take it to a print shop for it to be professionally printed. Manipulating is about taking the picture or manipulated image and making something else. It's not about removing the printer that printed on the page. In any event, Photoshop has a few tools that can be used to do both editing and manipulation. Layer, masking, and flattening Photoshop has two ways to modify raster graphics: the Layers panel and the image-editing functions in the options bar. The Layers panel enables you to layer images on top of one another so you can manipulate an image by adding and deleting layers. The Layers panel is easier to use for most image-editing tasks. If you're a new user or you're a seasoned professional who wants more control over the editing process, you may want to dive into the complex options that are in the image-editing functions (refer to Figure 3-1). **Figure 3-1:** Use the Layers panel to add, delete, and move layers. Layers enable you to separate layers into groups. So that you can add or delete layers easily, you can set the Layers panel to use a single-pane format (see the "Splitting the Layers Panel" sidebar, earlier in this chapter) or a double-pane format (which you can enable in a number of ways, as described later in the "Managing Multiple Layers" sidebar, in this chapter). When a new image is loaded into Photoshop, Photoshop automatically creates a thumbnail for a new image as a thumbnail preview of the image in the Layers panel. The layer workspace is the workspace where you do the actual editing of the image (refer to Figure 3-2). You can add, delete, or move a layer, make a layer visible or hidden, invert, or delete a layer, or you can create

Photoshop is used by designers, graphic artists, web developers, and by anyone who needs to produce and edit images. Photoshop is one of the most important desktop applications for graphics production and editing, along with similar software like Dreamweaver and Illustrator. Photoshop is a registered trademark of Adobe Inc. Photoshop's user interface has changed over time. Earlier versions of Photoshop use a method called "photographic editing" for editing the user's work. Starting with version 8, Photoshop uses "digital drawing" as its editing interface. The user can adjust the contrast, brightness, hue and saturation. All adjustments can be made by dragging or pressing the keys on your keyboard. Adobe Photoshop is able to automatically recognize everything on the page and can quickly find out if the page contains text, images or specific objects. Photoshop can also apply a wide range of different editing tools for different parts of the image or photo. Photoshop makes it easy to create high-quality images from one or multiple photographs. The main tool for this is the layer. Photoshop is able to sort all the objects in the picture to the appropriate layer so that each of them can be adjusted separately. Adobe Photoshop is a professional tool for many different purposes. It is a very valuable tool for web design, graphics design, 3D illustration and more. Adobe Photoshop is a robust software application. It can be used in a wide range of ways, either in the professional or in the regular use. Raimondo: Tuacahn Casino Expansion Project Approved By Town North Sound Wind – The Town of Westerly's Planning Board on Nov. 7 unanimously voted to approve the expansion of the Tuacahn casino and resort, located on Route 1 in the Town of Westerly. The Tuacahn, owned and operated by Carl & Jean Stilp, submitted a proposal seeking a large variance – an expansion of the project to 400 to 450 guests at the resort, with an attendant increase in car parking and a 133-unit condominium building on the golf course. The project also includes a 160-room hotel, a medical center, tennis courts and spa, among other amenities. The board's vote, said Town Coordinator Chris Thornton, is a "legally binding" approval, pending final public approval. Last month, the owners reached an agreement with the Town of Westerly to set aside 11 acres of the golf course. The Planning Board's vote followed comments from its members, said Thornton, including discussion on such issues as pollution, traffic and aesthetics. However, committee members voted to approve the project, which now goes before the Board of Finance for a final vote. The Town Board of Westerly's final vote on the project is scheduled for Nov. 28, said Thornton. "I was trying to keep the family from having to travel and from being worried, and I'm really glad that they have no worries now." McLellan said that early in the investigation, it was believed that the family's dog had entered the den through a window. He said the break was made during the autopsy. "We never expected to find the bones this quickly," he said, noting the bones of a human hand were found in the den and a missing finger in a den near where McLellan found the remains. "The fingertips suggest that this is not someone who was bitten by a bear," McLellan said. Not the first case A July 29 report by the North Carolina Wildlife Resources Commission found that an animal control officer killed a wild black bear this summer after the animal entered a home in Watauga County. The agency said it took the carcass to the North Carolina Veterinary Diagnostic Lab where the commission said the bear was diagnosed as rabid. No one was bitten.
